Global Shares performed strongly in the second quarter lead by technology from the US and Asia

For the quarter long dated bond yields rose strongly on tariffs and inflation uncertainty but fell back as fears eased

Emerging markets performed in line with global peers led by local technology shares

Trump's Liberation Day tariffs spooked markets, the trade standoff with China and conflicts drove volatility. The RBA cut rates in May and growth is sluggish

Markets Update

In April, President Trump reignited trade tensions by announcing broad-based tariffs on most imported goods, and higher rates for cars and steel. China and other key trading partners were directly targeted. Markets initially sold off on fears of a renewed trade war, but sentiment improved 7 days later when Trump announced a 90-day delay to the start of the tariff regime. China responded by imposing additional tariffs on the US which began a tit-for-tat escalation of tariff rates between the two. The trade war ended with a partial agreement in June, though China has restricted exports of Rare Earths and the US similarly with semi-conductor design software and advanced Artificial Intelligence (AI) chips.

Financial markets in the June quarter were predominantly influenced by shifting trade policy and geopolitical risks. Despite this, March quarter corporate earnings were stronger than expected aiding markets to recover strongly from early tariff driven weakness to end the quarter higher. The MSCI Global Share index rising 11.6% for the quarter, the US S&P 500 index reaching a new all-time high of 6,205 as the large US technology stocks had a particularly good quarter.

Bond markets were more volatile, US long-term Government Bond yields briefly touched 5%, the highest level in 18 years. This due to rising US Government debt and inflation uncertainty as a result of trade policy, though yields eased modestly toward quarter end.

Technology remained the key driver of global equity returns. Nvidia's earnings reflected ongoing strength in AI infrastructure and Asian technology stocks participated as well. Gold reached a new all-time high briefly above US\$3,500 per oz. in early April and backed off to US\$3,287 per oz. by quarter end as trade and geopolitical tensions eased.

The RBA cut interest rates by 0.25% in May for the second time this cycle as inflation receded. By contrast, the European Central Bank has cut its interest rate 8 times in the last year as they struggle to combat slowing growth. The US Federal Reserve (Fed) held interest rates steady at 4.25%–4.50% in June. While inflation is easing, the uncertain inflationary impact of tariffs saw the Fed take a wait and see approach.

In Australia, the ASX 200 rose 8.9% for the quarter, led by CBA whose share price closed June at \$185, rising circa 50% since July 2024. The unemployment rate held steady at 4.1% though economic conditions remain benign and, along with slowly moderating inflation, is keeping downward pressure on interest rates.

Looking Ahead

Overall, risk levels remain elevated driven by; uncertainty surrounding the roll out of US trade policy, ongoing geopolitical tensions (not just current conflicts) and US President Trump's 'transactional and fluid' style of policy development and implementation.

Central Banks continue to ease interest rates in the coming months as economic growth, among major developed world economies, slowly trends down, which will be supportive of markets. That said, we do not anticipate these economies declining into recession and conditions can remain flat to positive, providing the twists and turns of the coming months do not shock the system beyond what it is expecting or able to withstand.

We expect share markets to remain mildly positive notwithstanding, valuations across major share markets are elevated relative to history, particularly in sectors that have led recent gains. Hence diversification and exposure selection are key in this more uncertain environment.

China's economy remains sluggish and until the tariff situation globally has settled, we expect this to continue despite ongoing and targeted stimulus measures.

The Australian share market will continue to lag a little while technology outperforms. A rebound in resources would change this outlook but would also require a recovery in China, and no undue tariff impact.

We retain a neutral allocation to growth assets and focused on well diversified portfolios of quality assets for the coming months.

Key Features

Name	Alpha High Growth Fund
APIR Code	ETL3086AU
Inception Date	2 April 2007 (Merger 9 September 2021)
Perf Benchmark	Morningstar AUS Aggressive Target Allocation NR \$A
Peer Group	Australia Fund Multisector Aggressive
Mgmt Costs	0.89% p.a.
Buy/Sell Spread	0.20% / 0.20%
Platforms	Insignia, Praemium, HUB24, and PlatformplusWRAP
Fund Size	\$37.2m

Quarterly Commentary

The Alpha High Growth Fund delivered a total return of 5.60% (net of fees) in Q2 2025, underperforming the Morningstar Australian Aggressive Target Allocation Index by -1.53%.

Global share markets dipped sharply at the start of the quarter after the US increased tariffs on all trading partners, igniting a trade war. Sentiment pivoted on 9 April, when President Trump paused the planned tariffs after a sell-off in long-dated US bonds. AI-related technology stocks remained strong, driving markets higher, and the ASX 200 edged up, led by a rebound in financials and record highs at Commonwealth Bank. Oil prices spiked then stabilised as geopolitical tensions between Iran, Israel and the US eased.

The Fund's strongest contributors were large, AI-focused US tech names—NVIDIA, Broadcom, TSMC, Meta Platforms, Microsoft and Alphabet. Australian gold miners also outperformed, with Gold Road Resources drawing a takeover bid. Healthcare stocks such as GSK and consumer defensives like Nestlé lagged, as markets rotated into growth sectors on tariff relief. The biggest detractors were China-related names, including Alibaba, JD.com, Tencent, Rio Tinto and Geely Automobiles. Fixed income posted positive returns in Q2 despite lingering unease over rising US government debt.

In April we trimmed overall growth asset exposure and added longer-dated bonds, reflecting concerns that the tariff war could trigger a recession. We rotated into defensive sectors—taking new positions in healthcare names such as West Pharmaceutical Services and CSL, and consumer staples including Coca-Cola, Pepsi and L'Oréal. Conversely, we exited or trimmed higher-valued Australian names such as Technology One and Macquarie, cyclical resource exposures (copper, lithium and pipelines), and financials including BlackRock, Visa and JPMorgan. We also sold our positions in Geely and Barry Callebaut after their respective earnings results.

The Fund remains neutral and diversified, with only minor changes in May and June. Our focus remains on company fundamentals and diversification, and we see lasting opportunity in AI. Healthcare also appears attractive after lagging recent gains. We continue to favour high-quality companies and retain a slight tilt away from high-valuation stocks. Fixed income remains integral to risk management, with a preference for Australian bonds. We remain cautious amid ongoing uncertainty around US tariffs and rising government debt—while markets have held up, long-term risks persist.
